## The Torso Belt

Our easy to use Velcro closures make getting in and out of these belts a simple task. No need to remove the belt, it stays attached to the seat using a pinch buckle in the back, should it need to be removed it's as simple as releasing the buckle. Designed for people with poor upper body strength, "The Torso Belt" prevents unwanted forward and lateral movement, and maintains the torso in proper mid-line position while sitting. Great for use in car seats, wheelchairs, scooters and any seat that upper body support is needed. Driving evaluators have been recommending "The Torso Belt" to their clients for years, making them mandatory for individuals to have, in order to drive. Many van conversion locations have also found it beneficial to stock "The Torso Belt" for their customer's convenience as they can be included with the purchase of their vehicles.
